# HOW TO INSTALL VIRTUAL DRUMLINE 2.5.2 LIBRARY UPDATE

1. Make sure you have a working installation of Virtual Drumline 2.5.1 on your computer.

2. Launch the included **Native Content Updater** program.

3. The updater will ask you to locate the .NCU file. Browse to the **VDL_Update_252.ncu** file included with this download.

4. The Native Content Updater program should automatically locate your prior library installation and tell you. If it successfully locates your VDL library, you should receive this message. Click OK to confirm.

5. The updater will install the update and close itself.

6. Please note that there is no confirmation or finish screen.

Note: The "library" version field in the Virtual Drumline Instrument Options in Kontakt is no longer used. This is why this field may still show an older library version number after updating to 2.5.2. If you want to make sure that the 2.5.2 update was successfully installed, check the list of instruments in the VDL library. You should see a file named **–VDL Library v2.5.2** located here now.
